Measure the height of the space. Be sure to measure in each corner.

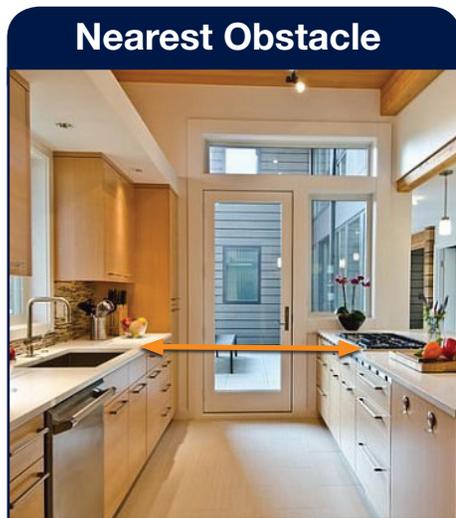

If you have any plumbing or electrical obstacles in the installation space, make sure to measure the depth to the nearest obstacle.

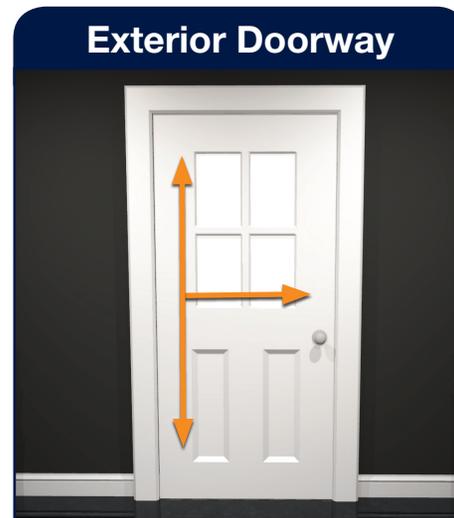

Measure the width of the install space three times; top, middle and bottom.

Measure from the bottom of the countertop to the floor in front of the range. This will account for any new flooring that has been installed.

Measure the distance to the nearest obstacle.

Measure the width of exterior doorways to ensure the appliance will get through.

Measure all interior doorways along the path to the install site. Write down the narrowest passage width.

If the dishwasher is going upstairs, measure the width of the stairway in multiple places, taking into account the handrails.
